

1 November 1983

MEMORANDUM FOR: DD/OP/PA&E

FROM:

[REDACTED]

C/HRPS

SUBJECT:

Potential [REDACTED] Move Problems - HRPS

REFERENCE:

28 October 1983 memo, same subject

An additional HRPS potential move problem has come to my attention. It consists of the need for continued access to a graphics terminal and plotter connected to the Agency mainframe computers. HRPS currently makes use of the Tektronix 4014-1 terminal, Tektronix 4631 hard copy unit, and the Hewlett-Packard 7221C eight-pen plotter to prepare graphs via SAS software. We do not know if the [REDACTED] computer center will have this or functionally equivalent equipment. It should be noted that this potential problem may also impact on I&AB's ability to produce reports.
